

Remote Health Monitoring System

Class Diagram

Patient

- patientId: "String"
- age: int
- illnessType: "string"
- gender: "string"
- contactInfo: "string"

- + getData()
- + update()

Server

- serverId: "String"
- connectionStatus: "string"
- ipAddress: float

- + recieveData()
- + analyzeData()
- + generateAlert()
- + sendToDoctor()

IoT Device

- deviceId: "String"
- deviceType: "string"
- status: "string"
- connectivity: "string"

- + measureHeartRate()
- + measureBloodPressure()
- + measureTemperature()
- + transmitData()

HealthData

- dataId: "String"
- heartRate: int
- bloofPresure: int
- temperature: float
- timestamp: int
- status: "string"

- + checkForAbnormalValue()

Doctor

- doctorId: "String"
- areaOfSpecialization: "string"
- contactInfo: "string"
- temperature: float

- +reviewAlert()
- + sendFeedBack()
- + reviewGeneralHealth()

FeedBack

- feedBackId: int
- recommendation: "string"
- follow-up: "string"

- + sendRecommendation()
- + scheduleFollow-up()
